

New ES-Backup 3.5 - For Mac OS X Intel

• Full feature set

- ES-Backup 3.5 for Mac OS X Intel offers the same feature set as versions 3.4/3.3.3 and thus can be used as both, a backup server with locally connected tape drives, changers and harddisks, and a remote network client.

• New Backup/Restore engine

- ES-Backup 3.5 for Mac OS X Intel already contains the new backup/restore engine which will be used for all supported operating systems with upcoming ES-Backup 4.0. The new engine offers faster data transfer during backup, restore and synchronize operations.

• HELIOS UB support

- ES-Backup 3.5 for Mac OS X Intel supports systems with and without HELIOS UB installations.

• Updated ES-Backup JAdmin Java administration application

- ES-Backup JAdmin 1.0.5 offers a re-designed user interface, compatibility for latest Java runtime environments and can be used with any 3.3, 3.4 and 3.5 ES-Backup Servers.

• More information and demoverision

- Detailed information on ES-Backup and a demoverision is available at www.es-backup.eu

ES-Backup - Support for additional Backup Devices

• UGSoft certified Sony AITe100-UL (FireWire and USB)

- During certification tests the new Sony AITe100-UL single tape drive showed very good performance with capacities of 40 to 104 GB per tape.
The AITe100-UL is the ideal backup device for Mac OS X systems without SCSI connections.

• More information on certified devices

- Nearly all tape drives and tape changers available in the market can be used without any problems with ES-Backup. In order to make it easier for customers to choose an appropriate backup device and to provide more safety, UGSoft frequently tests new backup devices and certifies them for use with ES-Backup.

- A complete list of all certified and officially supported backup devices is available at www.ugsoft.de/intl/esbackup/tapes.html
